

ABSTRACT

An adhesive composition is provided for adhering together roofing materials such as EPDM rubber and thermoplastic polyolefin (TPO). The adhesive composition includes a rubbery polymer comprising a blend of a thermoplastic block copolymer and a polyisobutylene.

- 5 The adhesive composition may further include a compatible tackifier and an amorphous polyolefin. The composition is a pressure sensitive adhesive which can be applied to roofing materials in a peel and stick manner and provides a long term, water-tight seal and high bond strength.
